SUMMARY

React Native developer with ~4 years of experience building production-grade mobile applications for Android and iOS, including offline-first systems handling large-scale datasets (100k+ records). Strong focus on performance, stability, and real-world reliability under constrained environments (low memory, poor network).

Experienced in end-to-end ownership—from architecture decisions to production deployment, debugging critical issues, and optimizing live applications used by thousands of users.

TECHNICAL SKILLS

Mobile: React Native, TypeScript, Expo, Redux Toolkit

UI: React Native Paper, React Native Elements, Styled Components, Custom StyleSheet

Android Native: Kotlin — Native Modules, Foreground Services, AlarmManager, Scoped Storage

Data & Offline: SQLite, WatermelonDB, Offline Sync, Chunked Batch Processing

Backend & APIs: REST APIs, Firebase (FCM, Push Notifications), Offline-to-server Sync

Web: React.js, JavaScript, HTML, CSS, Node.js (basics)

Dev Tools: Git, GitHub, Postman, CI/CD basics, Play Store & App Store Deployment

Other: Google Maps, Google Analytics, Barcode Scanner, Excel File Parsing,

PROFESSIONAL EXPERIENCE

Senior React Native Developer — RK Websoft Technologies Pvt. Ltd. June 2023 – Present

- Built and shipped multiple production apps for Android and iOS, now live on both stores and used by 4,500+ users across different client businesses.
- Owned the full app lifecycle end-to-end — from picking the architecture and writing the first screen to deploying releases, handling hotfixes, and supporting users in production.
- Wrote Android native modules in Kotlin to handle things React Native couldn't do out of the box, including foreground services, background scheduling with AlarmManager, and scoped storage for Android 13+.
- Architected a fully offline-first mobile app for field workers with no reliable internet — used SQLite and chunked batch processing to handle 100k+ record datasets without crashing on low-memory devices.
- Resolved a critical production crash in the Milk Dairy app during large database restores — the fix involved optimized SQL queries and batch inserts, which also made the overall app noticeably faster.
- Implemented real-time location tracking in KnotHR using foreground services, with route visualization (map markers and polylines) for admin dashboards.
- Set up automated backup schedules using AlarmManager, with background uploads to server APIs to keep data safe even in low-network areas.
- Collaborated closely with backend and QA teammates to catch bugs early and reduce issues after release.

FREELANCE EXPERIENCE

Mobile Developer — Construction App

2022 – 2023

- Developed dynamic task workflows with work item assignment, image capture, comments, and audio notes.
 - Implemented audio recording and playback features with proper state handling (play, pause, resume, restart).
 - Built offline-capable data capture for on-site usage and later synchronization with backend APIs.
 - Delivered full feature lifecycle from requirements gathering to client delivery.
-

KEY PROJECTS

KnotHR – HRMS Mobile Application (Android & iOS)

- Led end-to-end development of a full HRMS app used by 2,500+ users — covers 45–50 screens including attendance, leave, payroll, and employee management.
- Built an Android native Kotlin module for real-time employee location tracking using foreground services; routes shown on admin dashboards via map markers and polylines.
- Handled custom file picker for Android 13+ with proper scoped storage and runtime permission flows.
- Integrated Firebase push notifications for both Android and iOS — owned all production releases, version upgrades, and hotfixes.

Milk Dairy – Offline-First Field Operations App

- Designed and built a 100% offline app for dairy field agents — handles customer records, daily transactions, payment calculations, and reports without needing any internet.
- Diagnosed and fixed a production crash that happened when restoring databases with over 100k records — rewrote the restore flow using chunked batch inserts and SQL query optimizations, which also made the app noticeably faster.
- Built an automated backup system using Android AlarmManager that runs on a schedule and uploads backups to the server via API when connectivity is available.
- Added Excel-based rate chart import/export so clients can update bulk prices from a spreadsheet without touching the app code.

Delivery Management App

- Developed delivery workflows with barcode scanning for package validation
 - Integrated Google Maps for navigation and route guidance
 - Implemented real-time notifications using Firebase for delivery updates
-

EDUCATION

Bachelor of Computer Applications (BCA) — Anand Commerce College (2021 – 2024)

Higher Secondary (HSC) — Laxminarayan High School (2019 – 2021)

Secondary (SSC) — Laxminarayan High School (2017 – 2019)

KEY STRENGTHS

- Experience building offline-first apps and handling large datasets (100k+ records), even on low-memory devices
- Comfortable debugging real production issues and fixing crashes in live apps
- Have handled complete app lifecycle — from creating developer accounts to deploying and maintaining apps on Play Store and App Store
- Strong hands-on experience with REST APIs and third-party library integrations, including dealing with edge cases and failures
- Worked on hybrid setups using React Native with native Android (Kotlin) and iOS (Swift) when needed
- Focused on keeping apps stable, fast, and reliable in real-world usage—not just building features
